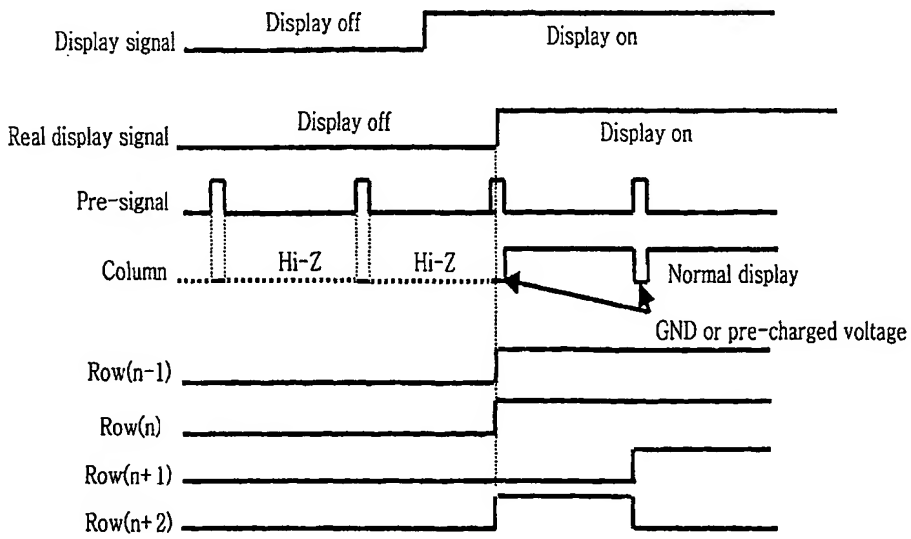
(54) Title: ORGANIC ELECTRO LUMINESCENCE DISPLAY DRIVING CIRCUIT FOR SHIELDING A ROW-LINE FLASHING



(57) Abstract: Disclosed is an organic electro luminescence (EL) display driving circuit. According to the present invention, it is possible to shield a generation of a row-line flashing, which may occur when a display signal from a display signal terminal enters the organic EL display driving circuit. The organic EL display driving circuit for shielding a row-line flashing according to the present invention includes a real display signal generating circuit, which is connected to a display signal terminal and a pre-signal terminal, for providing a bias circuit for column driving circuit and row voltage supply circuit with a real display signal.
